

Emiel Azucena

Full Stack Developer

Initao, Misamis Oriental 9022
09658839558 | emiell.azucena@gmail.com
[Portfolio](#) | [LinkedIn](#)

Full-stack developer with 4+ years of end-to-end ownership over multiple production systems in a regulated cooperative banking environment. Specializes in building internal platforms covering financial reconciliation, regulatory compliance, real-time operations, and organizational workflows — from requirements gathering through deployment and maintenance. Experienced with TypeScript, dual-database architectures (MongoDB + MSSQL), real-time WebSocket systems, JWT-based authentication with role-based access control, and containerized deployments via Docker and Nginx.

CORE TECHNICAL SKILLS

Language & Runtimes

- NodeJS, TypeScript, PHP, JavaScript

Framework & Libraries

- **Backend:** ExpressJS
- **Frontend:** ReactJS, Mantine UI, AG Grid, Handsontable, Bootstrap, Bulma CSS, JQuery, DataTables
- **Real-time:** Socket.IO

Databases

- MySQL, Microsoft SQL Server (MSSQL) and MongoDB

Infrastructure & DevOps

- Docker, NGINX , Apache, PM2 and Linux

Tools

- VS Code and Postman

PROFESSIONAL EXPERIENCE

Mindanao Consolidated Cooperative Bank (MCCB)

Sr. Software Developer / Analyst (January 2023 – December 2025)

- Build and deployed full stack applications serving internal banking operations across multiple departments, data reconciliation and regulatory reporting.
- Developed system ensuring regulatory compliance and audit trail requirements.
- Conducted requirements analysis through stakeholder interviews with department head and end-users to translate business needs into technical solutions.

- Managed complete development lifecycle: design, implementation, testing, deployment and maintenance of production systems.
- Collaborated with IT infrastructure team and core banking specialist to integrate solutions with existing banking infrastructure.
- Deployed applications using Docker containerization or as a windows service with NGINX/Apache reverse proxy configurations.

Mindanao Consolidated Cooperative Bank (MCCB)

Jr. Software Developer / Analyst (February 2021 – December 2022)

- Develop, enhance, modify and deploy system under the supervision by the Sr. Software Developer.
- Test and validate software changes before release.
- Document interfaces between new and legacy systems.
- Perform other duties as assigned.

Misamis Oriental Sport Complex (MOISC)

IT Staff (June 2018 – December 2020)

- Managed IT infrastructure including computer systems, network equipment, and multimedia setups.
- Maintained LAN infrastructure and resolved connectivity issues across facilities.
- Supported live event technical requirements including streaming, projection, and audio systems.

KEY PROJECTS

All system developed as solo developer, full ownership from requirements gathering through deployment and maintenance.

Regulatory Report System

(Solo Developer)

Centralized compliance platform for generating and submitting regulatory reports — AG Grid data entry, entity code mapping, multi-level approval workflows, role-based access control via role templates, temporary permission grants with automatic expiry, and a custom MongoDB-backed Token Bucket rate limiter.

Authentication Server

(Solo Developer)

Centralized JWT-based authentication service acting as the single sign-on point for all opt-in applications — issues and validates access and refresh tokens, password hashing, and an admin UI with AG Grid for cross-system user management.

ATM Reconciliation System

(Solo Developer)

Reconciles ATM transactions from ZIP archives, categorizing entries by transaction type (cash withdrawals, balance inquiries, interbank fund transfers) with precise financial calculations to ensure accurate settlement figures.

General Assembly System

(Solo Developer)

Member management and live election platform — TypeScript backend with domain-driven modules, member registration and management, live election display client, real-time voting, bulk SMS notifications, and background jobs for automated system maintenance.

Queueing System

(Solo Developer)

Real-time queue management system deployed across multiple counters — real-time WebSocket communication via Socket.io, customer-facing display with voice announcements, instant broadcast to all connected screens, and a dedicated control interface.

Organization File Repository

(Solo Developer)

Organization-wide document management system — category/subcategory/tags hierarchy with full-text search across all metadata, file versioning with modification history, and an immutable audit log on every file operation.
