

Emiel Azucena

Full Stack Developer

Initao, Misamis Oriental 9022 • 09658839558 • emiel.azucena@gmail.com • [Portfolio](#) • [LinkedIn](#)

PROFESSIONAL SUMMARY

Full Stack Developer with 7+ years of professional IT experience, including 5 years in software development. Spent 4 years as the sole developer at a regulated cooperative bank, building and maintaining production systems for financial reconciliation, regulatory compliance reporting, and real-time operations — owning the full SDLC from requirements through deployment. Core stack: TypeScript, Node.js, React, MongoDB, MSSQL, Docker, and Nginx.

CORE TECHNICAL SKILLS

Languages: TypeScript, JavaScript, PHP

Backend: Node.js, Express.js, REST APIs, WebSocket / Socket.IO, JWT / RBAC

Frontend: React, TypeScript, Mantine UI, AG Grid, Tailwind CSS

Databases: PostgreSQL, MSSQL, MongoDB, MySQL

DevOps & Infra: Docker, Nginx, Linux, PM2, Apache

PROFESSIONAL EXPERIENCE

Full Stack Developer – Contractor

Nov 2025 – Apr 2026

REPSShield

- Implemented full-stack features for the REPSShield app using React, Node.js, and PostgreSQL across frontend and backend tickets.
- Delivered responsive UI components and backend API endpoints, maintaining production quality under independent ownership.

Sr. Software Developer / Analyst

Jan 2023 – Dec 2025

Mindanao Consolidated Cooperative Bank (MCCB)

- Built and deployed multiple full-stack production systems used daily across bank departments — covering financial reconciliation, regulatory reporting, and internal operations.
- Owned the complete SDLC as sole developer: requirements gathering, design, build, test, deploy, and ongoing maintenance — all under regulatory audit and compliance constraints.
- Led stakeholder interviews with department heads and end-users to translate complex banking workflows into precise technical specifications and working software.
- Reduced deployment complexity by containerizing applications with Docker; configured Nginx and Apache as reverse proxies for production stability.
- Modernized and extended legacy Laravel/PHP systems, restoring maintainability while preserving compliance-critical functionality.

Jr. Software Developer / Analyst

Feb 2021 – Dec 2022

Mindanao Consolidated Cooperative Bank (MCCB)

- Contributed to full-stack banking applications using Node.js and React, working on both frontend and backend tasks.
- Drove code quality through peer reviews and technical discussions, fostering consistent engineering standards across the team.
- Resolved production defects in compliance-sensitive systems, maintaining operational stability during banking hours.

IT Staff

Jun 2018 – Dec 2020

Misamis Oriental Sports Complex (MOISC)

- Administered the facility's IT infrastructure — computers, network equipment, and multimedia systems — keeping systems operational across daily facility operations.
- Set up and operated technical requirements for live events including streaming, projection, and audio systems.

EDUCATION

Bachelor of Science in Information Technology

June 2014 – April 2018

Bukidnon State University – Alubijid External Studied Center

KEY PROJECTS (Solo – Full Ownership)

Regulatory Report System

- Built a centralized compliance platform handling multi-entity regulatory submissions, featuring AG Grid data entry, configurable RBAC role templates, multi-level approval workflows, and temporary permission grants with auto-expiry.
- Implemented a custom MongoDB-backed Token Bucket rate limiter — eliminating third-party dependency for a compliance-critical flow.

ATM Reconciliation System

- Automated reconciliation of ATM transaction archives (ZIP ingestion), categorizing cash withdrawals, balance inquiries, and other transaction types — generating precise settlement figures tied to live banking data feeds.

Election Management System

- Built a real-time member voting platform with TypeScript backend, Socket.IO live results, and SMS gateway integration for bulk member notifications.

Queueing System

- Built a real-time multi-counter queue management system using Socket.IO — with customer-facing displays, voice announcements, and a separate staff control interface.
